

Customization Options for Your Equipment Shelters

FIBREBOND'S concrete equipment shelters have been the industry standard for equipment protection since 1982. In addition to our standard shelter design, Fibrebond buildings can be customized with a variety of exterior finishes and size options.

CUSTOM SIZES

A variety of custom size options are available for instances where site accessibility is limited. Shelters can be designed according to clients specifications. Custom sizes are an ideal solution for coned spaces.

ARCHITECTURAL DESIGN

Buildings can also be designed to match the exterior of an existing structure. Shelter exteriors can be customized with any combination of stenciled or textured concrete, stucco, engineered stone accents, architectural metals, etc., for a more aesthetic look.

FOR 30 YEARS, Fibrebond has led the way in developing innovations in construction using precast concrete buildings. Our project managers, business development managers and customer service team have the deep industry knowledge needed to solve the unique challenges of our clientele.
