

WHY OFF-THE-SHELF ENCLOSURES LIMIT YOUR OPTIONS

Because every project is unique, you need a custom enclosure that protects the equipment and meets the project’s specific requirements. Off-the-shelf may seem “cost-effective,” but why are you limiting your business?

One size fits all doesn’t apply in the world of mission-critical systems and the enclosures that protect them. Discover why.

WHY YOU NEED SPECIALIZED ENCLOSURES

FLEXIBILITY

Custom enclosures can be built with future capacity needs in mind

Can be sized to fit your specific layout

QUALITY

Prefabricated enclosures that are mass-produced may not adhere to local or state codes—in these cases, retrofits must occur on site

Custom made means built to your specs with quality construction

SECURITY AND INTRUSION PREVENTION AND PROTECTION

Custom enclosures can be designed with more stringent security measures.

Unauthorized access is a real threat that could result in loss or damage as well as downtime

Security options include: concealed door hinges, captive door latches, intrusion-proof frames, and protective interior flange, which are custom add-ons

Consider adding intrusion alarms

CUSTOMIZE TO GET IT RIGHT THE FIRST TIME HOW FIBREBOND CUSTOMIZES ENCLOSURES

CUSTOM SIZES according to customer specs

ARCHITECTURAL DESIGN: match existing structures in concrete, stucco, engineered stone, and metals for a more pleasing aesthetic

Increased **FLOOR** and **ROOF** loading designs
